

How to boost words in ES Query

ES can boost individual phrases using interval queries, match or query string queries. You can also create sub clauses to a must or should query and boost results that match those clauses alone.

4. How to boost?

- a. Interval queries 1. They have order option 2. Slop 3. Boost 4. Multi word
 - i. $\text{ES Score} - \text{boost} * (\text{count} / \text{count} + 1)$
- b. Match Phrase - boost
 - i. `? boost* phrase_score`
- c. Query Strings
 - i. Match queries - OR - analyze - Regex support -> `? *`
 - ii.

5. Automatic static boost boosting -

- a. Should clause to our existing
 - i. `match_phrase/query string / intervals boost input (For now, 2)`
- b. Query String - Match
 - i. `Query + ""^2`
